WE WANT TO HELP YOU SETUP YOUR WIRELESS NETWORK

WHAT YOU NEED
All you need to get your wireless setup in your dorm or apartment is a Wireless router. The most common brands you can find at your local store are Netgear, Linksys, Belkin, and D-Link. We ask all students to refrain from using an Apple Airport Express since they do not work correctly on our network and we do not support them.

REGISTERING ROUTER
We have made registering your router as easy as possible for you. Once you have your router setup correctly, your browser should automatically take you to the registration page. If your browser does not, you can easily go to netreg.latech.edu and register your device there. When registering your router, simply choose the ‘USERS’ option and continue with the process.

SOME SETUP TIPS
When you are setting up your router, take time to secure your router with a password that is not a phrase, but use lower case and upper case letters, numbers, and special characters, like ‘@, $,’ to maximize your wireless security. Also while setting up your router, make sure you do not set your router in ‘Access Mode’, it will not work on our network.

NETGEAR USERS
Netgear has a unique setup. The first question it asks you during the router setup process is, “Do you want to set up as Access Mode?” and even recommends this option. You should always click ‘NO’, otherwise your router will not be able to do its job and you will continually have issues on your network. We do not allow ‘Access Mode’ on our network.

PASSWORD RESET
1. Go to password.latech.edu
2. Click Forgot Password.
3. If you do not remember your User ID, Select the appropriate link at the bottom of the page.
   a. In the Directory (http://latech.edu/directory) In the Directory Lookup, enter your name and hit Search. You may only want to use your first or last name.
   b. Find your name and select the Send me an email link, fill out the captcha and click Reveal. Your email address will appear as YourUserID@latech.edu
4. In the Forgot Password page, enter only your User ID without ‘@latech.edu’ and click Submit.
5. Enter your Campus Wide ID (CWID), B.O.S.S. Pin and Date of Birth where indicated and click Submit.
6. Type in your desired password and click Submit.

Now that you have your Used ID and password, you can check your email by visiting: http://webmail.latech.edu
1 Connect Router To Wall

When you plug your Ethernet cable into the wall from the router, you are going to plug it into the bottom port. This is very important since the top port is for Phone connections only.

2 Setup Router

Most routers you can follow the setup instructions to a ‘T’ and be alright. With the Netgear Router, make sure that you follow the image above, and the rest will work itself out.

3 Registering Device

Next, go to netreg.latech.edu and register your router. Click the link shown with arrow below and fill out the field with your username and password. Remember, the username is everything before the @ sign in your email.

4 You’re Done!

That is it, you should see a confirmation that your device is now registered. Just close out your browser and re-open to reset the browser. You should at this point be able to surf the web.

If you are having issues setting up your device, call with your username and MAC Address of Device at hand.
