McFarland

Hutcheson

Caruthers

Thatcher

Sutton

Kidd

Neilson

You must bring your own basic wireless router. Not a modem/router combo and not a mesh system.

Set up your router

1

Plug in the router

Connect the router to power.

2

Connect the Ethernet cable

Plug the Ethernet cable that came with your router into the yellow **INTERNET/WAN** port on the back of the router, and the other end into the Ethernet wall port in your room. In most rooms that wall port is blue or red.

**3**

Configure the router

Follow the manufacturer's setup instructions that came with your router.

4

Join your router's Wi-Fi

On your phone or laptop, select your router's Wi-Fi name and enter its Wi-Fi password.

5

Register with Tech

A CAS sign-in page should appear. Sign in with your Tech username and password.

6

No sign-in page?

While connected to your router, open **<http://latech.edu>** in a browser to trigger registration. There is no “s” in http — https will not work.

BEFORE YOU BUY OR PLUG IN

Use a basic wireless router. Modem/router combos and mesh systems are not supported. Once your router is registered, connect your phone, laptop, TV and game console to your own router's Wi-Fi.
